Subject: Statement of Hazardous Substances for HydroSal® SalCool, 8278-04

To Whom It May Concern,

We, at Salvona LLC d/b/a Advanced Beauty Labs, hereby certify that to the best of our knowledge and based on information provided by our raw material suppliers, the product HydroSal® SalCool, 8278-04 contains the following substances classified as hazardous under GHS/CLP criteria: Phenoxyethanol (1.593%) and Ethylhexylglycerin (0.177%). These components are classified as Eye Irritant Category 2 (H319), as they can cause serious eye irritation at these concentrations. In contrast, the cooling agents in the formulation—Ethyl Menthane Carboxamide, Menthyl Lactate, and Methyl Diisopropyl Propionamide—are not assigned hazardous GHS classifications within the product composition.

As part of our commitment to producing safe, high-quality, and compliant personal care products, we provide the following publicly available safety assessments for these ingredients:

- Phenoxyethanol: The Cosmetic Ingredient Review (CIR) Expert Panel has evaluated Phenoxyethanol and concluded it is safe as a cosmetic ingredient in the present practices of use and concentration. It is typically used in cosmetics at concentrations up to 1%.
- Ethylhexylglycerin: The CIR Expert Panel concluded that Ethylhexylglycerin is safe in the present practices of use and concentration. It is noted for its low dermal absorption and lack of genotoxicity or reproductive toxicity.

Despite the GHS handling classifications for the raw concentrates, the formulation is designed for safety in its final application, particularly as the Phenoxyethanol level in the finished cosmetic product is intended to remain below the admitted 1% threshold.

Should you require any additional documentation or have further questions, please feel free to contact us directly.

Sincerely,

Shai Shefer
