Subject: Nitrosamine Statement for SalSphere® Even Skin, 8894-04

To Whom It May Concern,

We, at Salvona LLC d/b/a Advanced Beauty Labs, hereby certify that to the best of our knowledge and based on information provided by our raw material suppliers, the product SalSphere® Even Skin, 8894-04 does not contain intentionally added nitrosamines. Please note that we do not routinely analyze our raw materials or finished products for the presence of trace nitrosamines; however, based on our recipe control and chemical composition, they are not expected to be present. Based on technical raw material documentation, we have evaluated constituent components for their potential to act as nitrosamine-forming precursors in the formulation:

- **Isostearamidopropyl Ethyldimonium Ethosulfate**. This is a quaternary ammonium compound added at a maximum level of 5% in the formulation. Quaternary ammonium structures are highly stable and do not possess nitrosatable nitrogen atoms capable of forming nitrosamines under standard cosmetic storage, manufacturing, and processing conditions.
- **Isostearamidopropyl Dimethylamine** - Residual at maximum 0.05% in final formulation. This may contain tertiary amine functionalities, which can theoretically undergo nitrosation under extreme chemical conditions in the presence of strong nitrosating agents. However, SalSphere® Even Skin, 8894-04 is formulated completely free of intentionally added nitrosating systems.

Additionally, the product is entirely free of secondary amines, which are the high-risk precursors for rapid, unstable nitrosamine synthesis. Consequently, the risk of nitrosamine formation in *SalSphere® Even Skin, 8894-04* is considered negligible, and the product is fully compliant with global cosmetic safety guidelines regarding amine levels and nitrosating controls.

As part of our commitment to producing safe, high-quality, and compliant personal care products, we actively work with our suppliers to ensure transparency and avoid the inclusion of materials that may be of concern to consumers and regulatory bodies. Should you require any additional documentation or have further questions, please feel free to contact us directly.

Sincerely,

Digitally Signed
