Subject: Statement on Therapeutic Goods Administration Status for MultiSal® Ceretin, 9098-06

To Whom It May Concern,

We, at Salvona LLC d/b/a Advanced Beauty Labs, hereby certify that to the best of our knowledge and based on information provided by our raw material suppliers, the product MultiSal® Ceretin, 9098-06 contains ingredients that are widely recognized for use in the Australian market.

A review of the formulation against the Therapeutic Goods Administration (TGA) Permissible Ingredients Determination indicates that the majority of the components—including Retinol, Ascorbic Acid, Thioctic Acid, Lactic Acid, and various standard excipients—are listed as permissible for use in Australian listed medicines, subject to specific concentration limits and labeling requirements (such as Vitamin A warnings).

We note that Palmitoyl Tripeptide-5 is currently not listed in the TGA Permissible Ingredients Determination for therapeutic goods. However, all ingredients, including this peptide, are generally suitable for use in products marketed as cosmetics in Australia, since all ingredients are currently listed on the Australian Inventory of Industrial Chemicals (AIIC/AICS) or are otherwise eligible for introduction under the Australian Industrial Chemicals Introduction Scheme (AICIS).

As part of our commitment to producing safe, high-quality, and compliant personal care products, we actively work with our suppliers to ensure transparency and avoid the inclusion of materials that may be of concern to consumers and regulatory bodies.

Should you require any additional documentation or have further questions, please feel free to contact us directly.

Sincerely,

Shai Shefer
