Unique&Easy Micro-Encapsulation Solutions

Product overview 8176-04

HydroSal® Lip Plumping

For a fuller, plumped appearance with instant sensory benefits

HydroSal® Lip Plumping is a proprietary delivery system designed to enhance the volume and appearance of lips. This technology utilizes sub-micron spheres that deliver active ingredients directly to the lips for an immediate and lasting plumping effect That the consumer can feel and see.

The technology uses bio-polymers encapsulating a collagen-boosting peptide and natural caffeine in the sphere's core (Fig 1). The shell instantly delivers ingredients to activate an intense sensation of plumping with a visual effect of intense natural lip color.

HydroSal® Lip Plumping offers a sophisticated, long-lasting lip-enhancing effect without irritation. This technology primarily benefits those seeking a gentle, non-irritating alternative to traditional lip-plumping products.

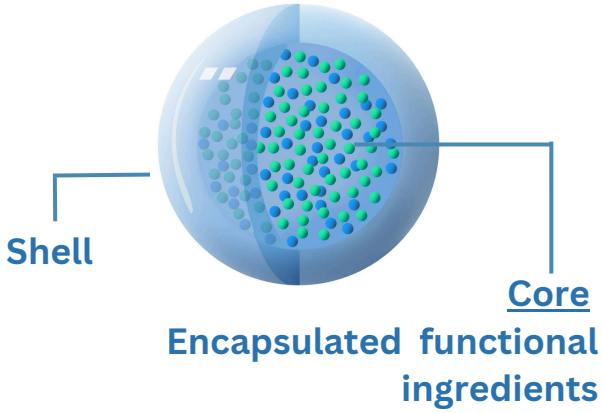

Figure 1: Structure of HydroSal® Lip Plumping

Figure 2: Effect of HydroSal® Lip Plumping on the lips

The technology delivers two functional ingredients. The instant sensation results from cooling **ingredients, caffeine,** and **polyphenols (EGCG)** that reside in **Green tea** extracts. The lasting effect is attributed to **Palmitoyl Tripeptide-38**, a synthetic peptide that stimulates collagen production. It is a next-generation version of Matrixyl (Palmitoyl Pentapeptide-4) and is known for its more comprehensive ability to reduce wrinkles and stimulate collagen production.

KEY BENEFITS

1. The user can **feel an immediate sensation** of plumping. The color of the lip darkens with time due to accelerated local blood flow.
2. **Long-lasting** effect due to the sustained release of peptides that boost collagen production and enhance skin hydration
3. **Unique, easy-to-use** technology is compatible with most lip care products.

HydroSal® Lip Plumping

For a fuller, plumped appearance with instant sensory benefits

Caffeine supports lip plumping.

Through multiple mechanisms, mainly by enhancing microcirculation, stimulating vasodilation, and temporarily improving lip volume and color.

1. Increases Blood Flow
Caffeine promotes vasodilation (widening of blood vessels) and enhances local microcirculation when applied topically. This temporarily causes lips to appear:

- Fuller
- More defined
- Rosier in tone (due to increased blood flow)

2. Stimulates Lip Swelling (Mild & Temporary)
Similar to how it wakes up skin, caffeine can mildly stimulate the skin and cause a temporary swelling effect, enhancing the plump appearance of the lips.

3. Enhances Lip Smoothness
Caffeine may also contribute to smoother lip texture by tightening the skin and reducing puffiness around the lip area, which makes lips appear more sculpted and contoured.

4. Synergizes with Other Actives
Caffeine is often combined with other lip-plumping agents like:

- Hyaluronic acid (for hydration and volume)
- Peptides (to support collagen production over time)

Polyphenols like EGCG (Epigallocatechin Gallate) support lip plumping.

While EGCG doesn't create a "swelling" effect like menthol or caffeine, it offers a biological plumping benefit by strengthening and rejuvenating the lip tissue over time.

1. Stimulates Collagen Synthesis
EGCG has been shown to upregulate collagen production in fibroblasts. More collagen means firmer, more elastic lip skin, leading to a naturally fuller appearance over time.

2. Protects Against Collagen Breakdown
EGCG inhibits matrix metalloproteinases (MMPs)—enzymes that degrade collagen and elastin. This slows down aging and maintains the structural integrity of the lips.

3. Improves Microcirculation & Tone
EGCG can enhance local blood flow and reduce inflammation, leading to better lip color and slight volumization from improved tissue oxygenation and nutrient delivery.

4. Hydration & Barrier Support
EGCG helps retain moisture and improve lipid barrier function, resulting in smoother, plumper-looking lips with reduced dryness or cracking.

5. Antioxidant & Anti-inflammatory
By neutralizing free radicals and reducing lip inflammation, EGCG supports long-term lip health and resilience, which contributes to a youthful, whole appearance.

It's ideal for sensitive lips and can be used in long-term treatments, such as lip serums, balms, or masks.

HydroSal® Lip Plumping

For a fuller, plumped appearance with instant sensory benefits

Palmitoyl Tripeptide-38 (Matrixyl® synthe'6) is a potent signal peptide that supports lip plumping

Stimulating the production of key structural components in the skin, primarily collagen, hyaluronic acid, and laminin. While it doesn't cause immediate swelling, it delivers a biological plumping effect over time, resulting in smoother, fuller, and more defined lips.

1. Stimulates Matrix Protein Synthesis
   - Boosts the production of collagen types I, III, IV, and fibronectin, which help reinforce the dermal structure beneath the lips.
   - Supports laminin-5 and hyaluronic acid, which contribute to firmness, moisture retention, and lip contour.
2. Increases Lip Volume Over Time
   - With regular use, this peptide helps rebuild dermal density, resulting in visibly plumper lips, particularly in aging or volume-depleted areas.
3. Smooths Fine Lines Around the Lips
   - Reduces the appearance of perioral lines (also known as smoker's lines), enhancing lip definition and a more youthful appearance.
4. Improves Lip Texture & Hydration
   - By reinforcing the skin matrix and enhancing hyaluronic acid synthesis, it contributes to smoother, softer lips with better hydration.
5. Non-Irritating, Ideal for Sensitive Users
   - Unlike irritating plumping agents (e.g., capsaicin), this peptide delivers gradual, long-term plumping without stinging or redness.

Methyl Diisopropyl Propionamide (MDP) supports lip plumping.
Delivering a non-irritating, refreshing sensation that stimulates blood flow to the lips.

1. Cooling Sensation = Increased Microcirculation
   - MDP activates TRPM8 cold receptors, resulting in a prolonged cooling effect on the lips.
   - This mild thermal stimulation promotes local vasodilation, increasing blood flow and making lips appear rosier and fuller.

2. Tingling = Perceived Volume Boost
   - The cool-tingle mimics the sensory feedback of traditional lip plumpers (like menthol or capsaicin), but without irritation or burning.
   - This leads to immediate user-perceived plumping—a significant cosmetic effect.

3. Non-Irritating & Pleasant Alternative
   - MDP is gentler than menthol, making it suitable for sensitive skin or daily use in lip products.
   - It can be used in glosses, serums, or balms to deliver a refreshing and volumizing feel.

4. Synergistic with Hydrating or Peptide-Based Actives
   - Enhances user experience when combined with hyaluronic acid, peptides (like Palmitoyl Tripeptide-38), or encapsulated actives for both instant and long-term lip plumping.

While MDP doesn't cause structural plumping, it creates a temporary, sensory-driven fullness effect through cooling-induced circulation and tingling. It's ideal for products aimed at refreshing, enhancing, and beautifying the lips, especially in non-irritating formulas.

HydroSal® Lip Plumping

For a fuller, plumped appearance with instant sensory benefits

Portulaca Pilosa Extract supports Lip Plumping.

A plant-derived active is used in lip care and anti-aging cosmetics. It is especially valued in lip plumping formulations due to its bioactive and regenerative properties.

Function and Purpose of Portulaca Pilosa Extract

1. Lip Plumping & Volume Enhancement
   - Stimulates the synthesis of hyaluronic acid and collagen in the lips.
   - Enhances lip volume, firmness, and natural contour over time.
   - Commonly included in lip serums and plumping glosses with claims of fuller, smoother lips.
2. Anti-Aging & Repair
   - Contains flavonoids and polysaccharides with antioxidant and anti-inflammatory properties.
   - Helps reduce fine lines, especially perioral wrinkles, also known as “smoker’s lines.”
3. Moisture Retention
   - Improves skin’s barrier function and prevents moisture loss, making lips appear more hydrated and supple.
4. Soothing & Calming
   - Traditionally used in herbal medicine for its anti-inflammatory and healing properties.
   - Helps soothe irritated or dry lip skin.

Lip plumping technology can benefit a wide range of consumers.

1. Aging Consumers
- Natural lip volume decreases with age due to the loss of collagen and hyaluronic acid.
- Fine lines around the lips become more visible.

Benefit:
- Restores volume, improves contour, smooths vertical lines, and enhances youthful appearance.

2. Beauty-Driven Millennials & Gen Z
- Influenced by beauty trends, social media, and celebrity aesthetics.
- Desire for full, well-defined lips without the need for injectables.

Benefit:
- Delivers an instant "selfie-ready" look with a trendy tingling or cooling effect.
- A safe, non-invasive alternative to lip fillers.

3. Sensitive Skin Users Avoiding Harsh Plumpers
- Traditional plumping agents (e.g., capsaicin) can cause stinging or redness.

Benefit:
- Encapsulated or peptide-based systems (like HydroSal® Lip Plumping) offer non-irritating, gentle enhancement with gradual results.

4. Dry or Dehydrated Lips
- Dehydration reduces lip volume and softness.

Benefit:
- Hydrating plumpers with humectants (e.g., glycerin) visibly smooth and restore fullness.
- Improves the comfort and appearance of dry lips.

Product overview 8176-04

HydroSal® Lip Plumping

For a fuller, plumped appearance with instant sensory benefits

Delivery system

The structure of HydroSal® Lip Plumping is based on Salvona's HydroSal® encapsulation platform, optimized to deliver instant and long-term lip plumping effects by combining cooling agents, hydrators, and biological plumpers.

1. Core – Active Payload

Encapsulated actives in Astralagus Gummifer Gum, and hydrophobic ingredients (Cetearyl Ethylhexanoate, Glycerin) that support lip plumping through different mechanisms:

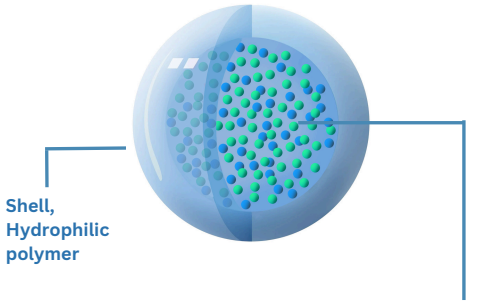

- Cooling agents (Methyl Diisopropyl Propionamide): Trigger neurocosmetic fresh sensation, mild vasodilation, for instance, resulting in a perceived plumping effect.
- Hydrators (Glycerin, Cetearyl Ethylhexanoate): Increase lip moisture, improving softness and volume.
- Peptides (Palmitoyl Tripeptide-38) and Botanical Stimulators (Portulaca Pilosa Extract): Stimulate collagen synthesis for longer-term volumizing.

2. Shell – Polymer Matrix

- Hydrophilic polymer network (e.g., Hydroxypropyl Methylcellulose): Stabilizes the capsule and enables adhesion to the lip surface.
- Enables moisture-triggered or pressure-triggered release when rubbed or pressed (e.g., lip rubbing action).

3. Delivery Properties

- Smart release: Actives are released gradually over time or in response to mechanical stimulation (such as friction or moisture from the lips).
- Film-forming: Creates a thin, flexible layer over the lips to enhance adherence and prolong the effect.

The Value of a Specialized Delivery System for Lip Plumping

1. **Lips Lack Oil Glands**

Lips dry out quickly, making moisture retention critical. A delivery system protects hydrating and plumping actives, improving their stability and surface retention.

2. Thin, Sensitive Skin

The lip barrier is fragile and prone to irritation. Technologies like HydroSal® Lip Plumping allow for controlled, gentle release to avoid stinging or discomfort.

3. Sustained Performance

Instant plumpers fade quickly. Encapsulation enables a gradual, long-lasting release, making effects visible for hours—ideal for both daytime and nighttime use.

4. Targeted Delivery with Less Waste

Lip products are easily wiped away. A smart delivery system improves adhesion, reducing active loss and maximizing performance.

5. Multifunctional Benefits

Advanced systems combine immediate sensory impact (e.g., cooling) with biological treatment (e.g., collagen stimulation), offering both instant and long-term lip enhancement.

Product overview 8176-04

HydroSal® Lip Plumping

For a fuller, plumped appearance with instant sensory benefits

HydroSal® Lip Plumping technology is unique.

Combining immediate and lasting effects that the consumer can feel and see.

Immediate plumping sensation:

Combining encapsulated ingredients creates a long-lasting sensation on the lips without stinging, irritation, or a strong odor. Its plumping effect makes it particularly useful with functional peptides without sensorial benefits; thus, consumers can't feel their impact.

The plumping effect of HydroSal® Lip Plumping suits sensitive skin, making it a gentle alternative to harsher agents like Capsaicin, Cinnamon, and Menthol. These ingredients work by slightly irritating the skin, causing blood vessels to dilate and the lips to temporarily swell, which can give them a fuller, darker appearance.

Encapsulation has a prolonged effect compared to natural sensorial agents, which can wear off quickly. This makes it an excellent ingredient in lip plumping.

The lips have a high concentration of blood vessels, which is why they naturally appear pink or red. When blood flow is increased, more oxygenated blood reaches the lips, intensifying their natural color. This makes them appear darker and fuller. With limited scientific evidence, we observed that HydroSal® Lip Plumping accelerated blood flow or vasodilation (the widening of blood vessels), making lips appear darker or plumper.

Lasting Effect:

Palmitoyl Tripeptide-38 is known to stimulate collagen production in the skin. With this technology, we extend the benefits to the lips.

Palmitoyl Tripeptide-38 mimics the natural processes that signal the skin to produce collagen. Promoting the synthesis of collagen, elastin, and other critical proteins in the skin matrix helps improve skin structure and resilience.

Continuous use of lip care products containing HydroSal® Lip Plumping helps smooth the lips and reduces the depth and appearance of wrinkles. It works on deeper layers of the skin and helps plump up the skin from within, smoothing out fine lines.

The peptide improves skin hydration and volume by promoting hyaluronic acid synthesis. It helps the skin retain moisture, resulting in more hydrated and plumper lips that appear more youthful.

Unique&Easy Micro-Encapsulation Solutions

HydroSal® Lip Plumping

For a fuller, plumped appearance with instant sensory benefits

Testing protocol:

We evaluated the efficacy of a technology, HydroSal® Lip Plumping, incorporated in a balm. The effect of the technology on increasing lip volume, hydration, and appearance, both instantly and over time.

1. Panel Selection
   - Participants: 15–30 healthy volunteers
   - Criteria:
     - Ages 18–55
     - No lip injections in the past 6 months
2. Study Design
   - Type: double-blind
   - Duration:
     - Immediate effect: Baseline, over 30 min, post-application
3. Product Application
   - Amount: Apply a standardized dose (e.g., 0.1 g) directly to clean lips.
4. Self-Assessment (Questionnaire)
   - Ask panelists to rate:
   - Fullness of lips
   - Sensory perception (tingling, cooling, irritation).

Results:

The sensory feel of lip plumping is described as:

- Tingling Awakening: A gentle, noticeable tingling that signals the product is working.
- Cooling Refreshment: A refreshing, minty-cool sensation that leaves the lips feeling invigorated and alive.
- Soft Pulsing: A mild, rhythmic feeling—almost like a micro-massage—caused by increased circulation.

Figure 4: Shows the numerical grade of the panel.

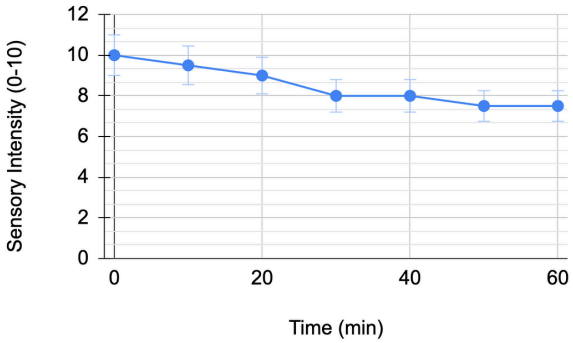

Figure 4: Sensory intensity of lips plumping sensation.

The visual impact of lip plumping

Here are words and phrases the panelists use to communicate the perceived aesthetic improvements of HydroSal® Lip Plumping:
Fuller, Amplified volume, more defined lip contour, smoother, youthful, refreshed, etc.
The numerical evaluation of the visual impact is described in Figure X.

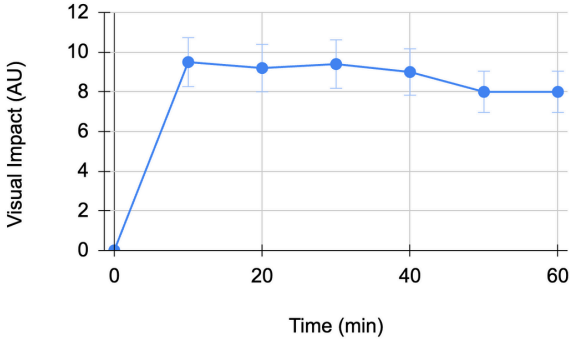

Figure 3: Visual impact of HydroSal® Lip Plumping, self evaluated by panelists (n=12)

Unique&Easy Micro-Encapsulation Solutions

HydroSal® Lip Plumping

For a fuller, plumped appearance with instant sensory benefits

People seek lip plumping for both aesthetic and psychological reasons.

People plump their lips to look younger, feel more attractive, and align with contemporary beauty standards—often with safe, topical solutions that enhance both appearance and self-esteem.

Lip care formulation concepts using HydroSal® Lip Plumping

1. Plumping Lip Gloss
Claims:
High-shine gloss that delivers a cooling sensation, visibly fuller lips, and smoother texture.
Key Ingredients
- HydroSal® Lip Plumping (5–10%) – for controlled release of cooling and peptides
- Castor Oil + Hydrogenated Polyisobutene – high shine and slip
- Vitamin E (Tocopheryl Acetate) – antioxidant protection
- Flavor/fragrance – optional

Texture: Glossy, non-sticky with a tingling feel
Use: Swipe on throughout the day for plumping and moisture.

2. Overnight Lip Mask
Claims:
Deep hydration and collagen-boosting while you sleep for softer, fuller lips by morning.
Key Ingredients
- HydroSal® Lip Plumping (5–7%)
- Shea Butter + Caprylic/Capric Triglyceride – rich moisturization
- Hyaluronic Acid (LMW) – deep hydration
- Beeswax/Candelilla Wax – occlusive layer

Texture: Rich balm, occlusive
Use: Apply before bed to restore volume and smoothness overnight.

3. Plumping Lip Serum (Clear or Tinted)
Claims:
A lightweight serum that delivers both an instant flush and long-term firmness.
Key Ingredients
- HydroSal® Lip Plumping (5%)
- Glycerin + Propanediol – hydration booster
- HydroSal® Moisturiser, for deep moisturization
- Tints (optional): Iron oxides or plant extracts for sheer color

Texture: Thin gel-serum
Use: Apply under gloss/lipstick or on bare lips

4. Stick Balm Format (Twist-Up)
Claims:
A convenient plumping stick for all-day moisture and volume boost.
Key Ingredients
- HydroSal® Lip Plumping (3–5%)
- Butters (e.g., Cocoa, Mango) – emollient base
- Natural Waxes (e.g., Beeswax, Carnauba) – balm structure
- Jojoba Oil or Squalane – fast absorption
- MultiSal® Vitamin C derivative (optional) – brightness

Texture: Solid stick, melts on contact
Use: All-day comfort with subtle volume increase

✅ Notes on HydroSal® Lip Plumping:
- Recommended usage level: 3–10%, depending on desired intensity
- Smart release activated by moisture and friction (rubbing lips together)
- Compatible with anhydrous, emulsion, or gel-based systems.

HydroSal® Lip Plumping	**10.00**

HydroSal® Lip Plumping technology delivers long-lasting plumping effects to the lips by gradually releasing active ingredients. It can be incorporated into various lip care products to improve lip volume, hydration, and texture.

Here are the types of products that can utilize HydroSal® Lip Plumping:

- Lip plumping glosses
- Lip balms
- Lip serums
- Overnight lip masks
- Lip primers
- Tinted lip balms or lipsticks
- Lip scrubs with plumping action

HydroSal® Lip Plumping

For a fuller, plumped appearance with instant sensory benefits

Table 2: Comparison between HydroSal® Lip Plumping vs. Commercial Lip Plumping Actives

Critera	HydroSal® Lip Plumping	Capsaicin-Based (e.g., Vanillyl Butyl Ether)	Menthol / Peppermint Oil	Hyaluronic Acid (HA)
Mechanism of Action	Encapsulated collagen boosting peptide + sensory activities to stimulates blood flow	Irritant-based vasodilation	Sensory cooling/tingling; vasodilation	Hydration-based volumizing
Onset Time	3–5 min (friction/moisture-activated)	2–5 min	1-3 min	10-30 min
Duration of Effect	The sensory effect can last for 1-4 hours (controlled release). The effect of peptide may take 4- weeks	1-2 hours	1-2 hours	4-12 hours
Sensory Feel	Cooling, fresh + mild tingling; non-irritating	Strong burning/tingling	Cool, fresh, sometimes stinging	None
Irritation Potential	Low (controlled, gentle)	High (can sting or burn)	Moderate (depends on dose)	None
Long-Term Benefits	Yes — collagen support via peptide	No	No	Moisturization only
Suitable for Sensitive Lips	Yes	Often too harsh	Dose dependnet	Yes
Claim Support	Immediate + long-term plumping	Instant volume with irritation	Instant freshness + mild volume	Smoother, hydrated lips
